Artesia, N. M., Nov. 14.-Oil men who experts regard it as a remarkable well. the "dynamite conspiracy" trial today. It has a flow of from 25 to 50 barrels of oil a day at a depth of about 900 feet. This oil is mixed with 90 percent water, and comes from a six-inch casing that was inserted in the eightmeh casing. Between the two casings, at a depth of 100 feet from the bottom of the well, a packer was placed to shut off the artesian flow from the six-inch casing. Ariesian water continues to flow between the casings.

tinnes to flow between the casings.

Gas in large quantities accumulates at the bottom of the six-inch casing and at times escapes, throwing the water and oil several feet above the top of the derrick. The weight of the 90s feet of water greatly retards the flow of oil and the company has ordered a pump to draw the oil from the bottom of the well. It is believed that he soon as all the water is removed the well will have a capacity of 500 barrels of oil a day. The company is preparing for this immense quantity of oil and has built a reservoir 300 feet east of the well that is 100 feet square and

"Do these trade trips pay?" he asked. He then proceeded to answer the question in the affirmative by saying that to get acquainted was half the battle and that such a trip as the last one gives the business men a better chance than they could otherwise have to meet the trade. He said that the country clubs of Douglas, Bisbee and El Paso were responsible for one-half of the trade acquaintanceship in the territory visited by the trade excursion and that the territory visited is El Paso territory because of these acquaintances.
